Adhesives Changes to the Araldite 2000 Range NEWSLETTER:

Dear valued customer,

We are committed to continuously improve the quality of our Adhesives products. As a consequence I would like to announce the following changes to the 2000 range portfolio:

Araldite 2010 when current stocks are sold will be deleted and replaced by **Araldite 2010-1**. Our evaluations have concluded that the new product will give similar properties to the old but with improved manufacturing to give a more consistent product, and better storage characteristics.

For Araldite 2014 we are being advised in Europe to change the labeling to contain Orange Toxic symbol. To avoid this change in labeling we have formulated an upgraded version called **Araldite 2014 -1**. At the moment new stocks are being manufactured and we strongly recommend that all customers convert to the new product. At the same time we would announce the deletion of Araldite 2014 in Europe, with an intention to complete within 3 months.

The cartridge product will be provided with the latest innovative mixers currently available.

On separate sheets please see the new TDS documents, and below a cross reference table showing new products against old codes .
