

Indestructible

® ***specialist coatings manufacture***

**Leaders in specialist
high-performance surface coatings**

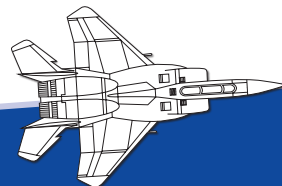

indestructible.co.uk

Pioneers for over 40 years

Indestructible Paint is renowned for being a pioneer of high-performance surface coatings. For over 40 years, through investment in innovation, the company has been leading the way in the development of a variety of specialist and niche surface coatings, all of which solve key technical challenges, particularly around environmental sustainability.

Indestructible Paint's coatings protect engines, air frames, power generation and industrial gas turbines at temperatures of up to 1,000°C.

Aerospace

Defence

Rail

Industrial gas turbines

Diverse coatings delivered worldwide

We offer a diverse product range of industrial surface coatings for a variety of advanced sectors and go the extra mile to provide solutions to meet your specific technical requirements. In fact, 75% of all the coatings we sell are specially formulated or adapted for our customers.

Our products meet some of the most demanding standards in the world and we're proud to hold key industry accreditations such as AS 9100, ISO 9001 and ISO 14001.

We offer an international service, delivering to over 80 countries around the world with rapid delivery available for original equipment and repair requirements.

High-performance surface coatings engineered for the environment

It's time to go chrome-free

Indestructible Paint is at the forefront of efforts to develop coatings to help make the world safer, better and greener. Following a decade of extensive research and development, there has been high interest in the revolutionary chrome-free coatings we've created.

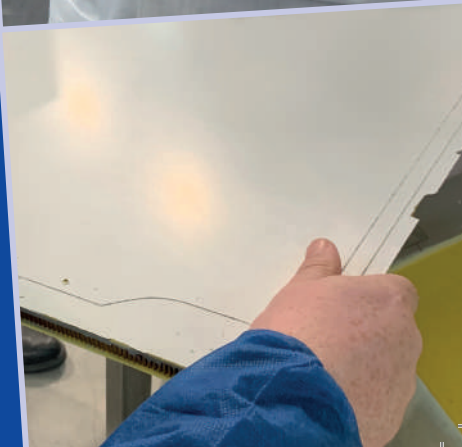

CFIpal is the first viable alternative to diffusion coatings containing Chromium-VI, providing highly-durable protection to aerospace and industrial gas turbine hot-end components where temperatures up to 1,000°C are common. CFIpal is not only greener but exceeds the performance of traditional coatings. It has already been awarded major approvals from industry primes, including one of the world's largest aero engine manufacturers.

Also now available is a chrome-free version of Indestructible Paint's popular Ipcote range of sacrificial aluminium base and seal coats which have high-corrosion and temperature resistance. In addition, a range of chrome-free anti-corrosive primers can be ordered.

Smoother and faster composite finish

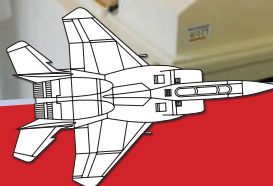

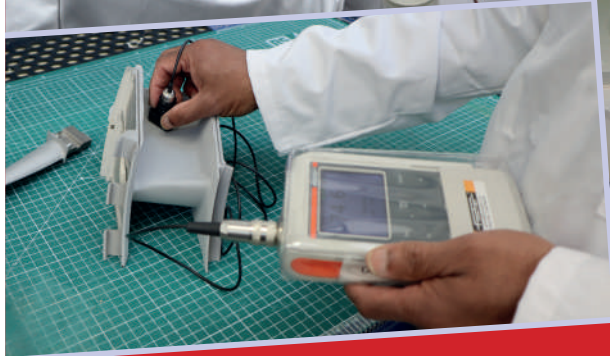

Indestructible Paint's novel in-mould priming system creates a smooth surface for finishing and decoration, minimising handwork and reducing production times by up to 24 hours.

Investing in tomorrow, today

Our team of laboratory experts continue to work intensively to develop solutions for a greener tomorrow. We regularly invest in training, research and development to ensure both our people and our laboratory are the best in the industry.

**We don't just supply coatings,
we partner with you on great solutions.**

Talk to us

If you have an environmental challenge involving the surface coatings used on your products, talk to us about how we could help you find a solution that's both engineered for the environment and for performance.
