

**Subject: PR-2870 Permanent Discontinuation**

**Sealant ES Bulletin No. S-ESB-22-01**

**Issued by: Emily Wong**

**Date: January 2022**

**Approved: Bill Keller**

**Distribution: Global  
APPROVED for customer distribution**

---

## Summary:

PPG is permanently discontinuing production of all types and classes of PR-2870 effective immediately. This bulletin is an update to PPG's October 2021 notice announcing a temporary product line manufacturing hold.

## Details:

Due to ongoing manufacturing challenges associated with the PR-2870 product line, PPG will be permanently discontinuing future production of all types and classes of PR-2870 effective immediately. Please note that all material that PPG has supplied to date has been fully compliant to the respective requirements it was released to.

## Alternative Products:

- The current alternative product PPG offers for Mil-PRF-81733 requirements is P/S 870.
- For customers requiring a non-chrome, corrosion inhibitive (NCCI) material, PPG's alternative is PR-1775B qualified to the AMS 3265 specification.
- In the EU, PPG also offers PR-1771B as a 1.1 specific gravity NCCI sealant

## Outlook:

PPG remains steadfastly committed to developing and supplying environmentally sustainable products. Updates to PPG's NCCI sealants product offering will be shared as new developments warrant.

Thank you and Regards,
